

DAHP-1

$\phi 3$

DAHP-2

6-32 blind

10-24 thru

There are two different configurations available. The only difference is the post orientation is rotated 180 degrees. On the top, in red, is DAHP-1 and on the bottom in gray is DAHP-2. The connecting rod and screw mount from the trapezoidal side of the post, so if the two small legs are implanted medially then DAHP-1 would be a better choice because the connecting rod and mounting screw will be more accessible. Please specify configuration during ordering.
